DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

1. The species of the claimed invention in claims 10-12 and 37-41 regarding the method of forming an aluminum film comprising flowing an aluminum containing precursor in the chemical vapor deposition reaction chamber, flowing at least one gas of ammonia and/or nitrogen trifluoride therein to form the aluminum.
2. The species of the claimed invention in claims 13-16 and 42-48 regarding the method of fabricating an interconnect comprising flowing a first titanium containing precursor, flowing nitrogen in the chemical vapor reaction chamber to form a first titanium nitride, flowing a second titanium containing precursor, flowing at least one gas of ammonia and/or nitrogen trifluoride simultaneously with the flowing the second titanium precursor to form a second nitride over the first nitride, flowing an aluminum containing precursor to form an aluminum on the second layer of titanium nitride.
3. The species of the claimed invention in claims 49-51 regarding the method of fabricating an interconnect comprising forming a titanium silicide, forming a first layer of titanium nitride on the titanium silicide, forming a second titanium nitride on the first titanium nitride, forming an aluminum on the second layer of titanium nitride wherein the aluminum film has a small grain size.

4. The species of the claimed invention in claims 52-58 regarding a method for forming a transistor with an interconnect via, defined by a surface substantially free of voids, comprising etching an interconnect into silicon oxide or BPSG to define a semiconductor defining an interconnect via comprising an active region of a transistor, exposing the semiconductor structure to a titanium containing precursor gas flow at a rate of 10 to 100 sccm and nitrogen at a flow rate of 10 to 1000 sccm and forming a titanium nitride film on the semiconductor structure, exposing the semiconductor structure with the titanium nitride film to a titanium containing precursor gas and to ammonia or nitrogen fluoride at a flowrate of 10 to 1000 sccm and forming a second titanium nitride film having a polycrystalline orientation, and exposing the semiconductor structure with the second titanium nitride film having a polycrystalline orientation to an aluminum containing organometallic precursor to form an aluminum interconnect.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
